

Lessons learned From my life in science.

A conversation with Prof. Avram Hershko

Prof. Avram Hershko
Nobel Laureate in
Chemistry, 2004

Department of Biochemistry,
The Rappaport School of
Medicine, Technion- Israel
Institute of Technology,
Haifa, Israel.

Prof. Hershko will briefly describe how the ubiquitin system was discovered and what general lessons can be learned from this adventure.

One example is the importance of having excellent mentors at an early stage of scientific career, whose influence may greatly affect much of subsequent research.

Another is choosing a research subject that is important, but not yet in the mainstream of science as well as always being on the bench.

Prof. Hershko will also discuss the importance of recognizing accidental observations that may lead to novel discoveries.
